## EDUCATION

---

- |   |                    |                             |
|---|--------------------|-----------------------------|
| <b>University of Texas</b>  | <b>Austin, TX</b>  | <b>Sept 2017 – May 2019</b> |
| • M.S. in Computer Science. (GPA: 3.81/4.00)  |                    |                             |
| <b>University of Wisconsin</b>  | <b>Madison, WI</b> | <b>Sept 2010 – Dec 2014</b> |
| • B.A. Triple Major, Computer Science, Economics with Honors, Mathematics. (GPA: 3.80/4.00) |                    |                             |

## WORK EXPERIENCE

---

- |  |                                       |                                   |
|--|---------------------------------------|-----------------------------------|
| <b>Cloud Architect Engineer</b><br>Omnia Storage Team  | <b>State Street Financial Service</b> | <b>June 2019 – September 2019</b> |
| • Built auto-deployment system of IBM Cloud Object Storage in multi-site clusters using <a href="#">Ansible</a> , <a href="#">Docker</a>   |                                       |                                   |
| • Developed a distributed workload generator and performance benchmark toolkit in <a href="#">Go</a>   |                                       |                                   |
| <b>Software Engineer</b><br>DB2 LUW federation team  | <b>IBM</b>                            | <b>August 2015 – August 2017</b>  |
| • Constructed <a href="#">Hive</a> and <a href="#">Impala</a> wrappers with <a href="#">C++</a> and <a href="#">Java</a> to support federation database between traditional RDBMS and Hadoop-based data warehouse solution |                                       |                                   |
| • Created automated setup tools with <a href="#">Shell</a> that reduce product configuration time by 75%   |                                       |                                   |
| • Enhanced server option optimization tools using <a href="#">C</a> to reduce federation database performance tuning time by 90 % and enable the capability of tuning the product against Hive, Impala, and Spark          |                                       |                                   |
| • Resolved over 20 defects, including a severe memory leak issue that impacted a \$1.6 million deal. <i>Awarded IBM Manager's Choice Award 2016</i>  |                                       |                                   |
| <b>Software Engineer Internship</b><br>HPC infrastructure team   | <b>Schlumberger</b>                   | <b>May 2018 – August 2018</b>     |
| • Implemented a monitoring component of the in-house High-Performance Computing (HPC) engine in <a href="#">C++</a> to provide the fault tolerance and handle the “straggler” problem                                      |                                       |                                   |
| • Employed SGD algorithm to dynamically learn the best timing for backup executions of the in-progress tasks based on the computation task characteristics   |                                       |                                   |
| • Built a <a href="#">C++</a> code generator that automatically generates the application layer code based on the engine API   |                                       |                                   |

## SELECTED PROJECTS

---

- **RustFS** (2018 - 2019). Building a user-space file system that leverages NVMe SSD. [Rust](#), [SPDK](#)
- **Strata with Lease** (2018). Extended Strata file system with Lease mechanism to support concurrent file access across processes. [C](#).
- **HyperPebblesDB** (2018). Constructed a key-value store that is part of LevelDB family with focus on reducing write amplification. [C++](#), [CMake](#), [Autotools](#)
- **Distributed Key-Value Store** (2018). Built a distributed key-value store with [Python](#) that uses *eventually consistency* model with two session guarantees: *Read Your Writes* and *Monotonic Reads*.

## LANGUAGES AND TECHNOLOGIES

---

- **Languages:** C++, C, Python, Go, Rust, Shell, SQL, Java, Lisp, MATLAB
- **Software:** CMake, Autotools, Git, Docker, Ansible, QEMU, Tensorflow, Keras, ClearCase, Hive, Impala, Maven, Hadoop
